

Weekly Review—March 13, 2020

March Madness has arrived but not in its usual “sporting” fashion. Two weeks ago, my commentary contained the following narrative:

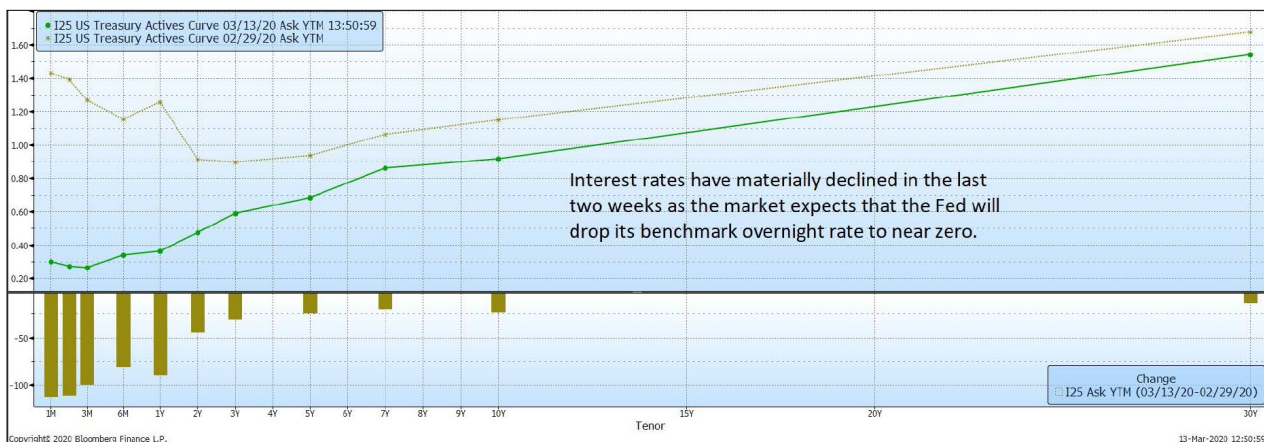

All eyes are on the coronavirus this week as fears of its contagion currently have financial markets firmly in a stranglehold. Fears of a global economic slowdown resulting from travel, supply chain, and consumption disruptions have forced equities well into correction territory while pushing longer-term Treasury yields to historic lows. The 10-year Treasury Note is currently trading at a 1.15% yield while the long-bond is at 1.66%. Understanding that the Fed’s current lower-bound fed fund target rate of 1.50% is helping prop up short-term interest rates, the treasury curve’s current inversion sends policy makers a screaming message to lower rates. According to current federal fund contracts, the futures market has priced in benchmark rate reductions at the March, June & September FOMC meetings.

Fast forward to today, equities have shifted from its eleven-year bull market run to bear territory with its decline in excess of 20% from recent highs while treasury yields continue to set all-time lows. Earlier this week, the 10-year Treasury yield fell to 0.54% (half of what it was two weeks ago – Such MADNESS!) while the 30-year bond declined to 0.99%. Evidenced in the graph below, overall treasury yields have fallen with the short end of the curve declining nearly 115bps. While the shape of the curve has for the most part normalized, all that remains is for the Fed to cut overnight rates to near zero. Fed Fund futures expect policy makers to drop its benchmark rate nearly 100bps next week taking their effective overnight rate to levels not seen since the Great Recession. With yesterday’s surprise “QE4” announcement, the Fed looks to pump additional liquidity into the market by expanding its current T-bill purchases to include longer-term instruments across the curve. The Fed’s action of purchasing securities is known as quantitative easing (QE) which was last used during the financial crisis, though the Fed isn’t currently buying bonds to deliberately lower interest rates. At least, not yet!

Looking forward, expect continued volatility in both stocks and bonds as market participant impatiently wait for signs that the headcount of those effect by the virus have peaked. For those that have investment portfolio responsibilities – With treasury yields at all-time lows, expect MBS/CMO prepayments to pick up. As such, consider reaching out to your CMG sales rep to explore the potential benefits of a “down-in-coupon” trade.

Let me know if you have questions.
